**To:** Anders, Krista (HEALTH) <krista.anders@health.ny.gov>

**Subject:** Other St. Gobain Facilities

Hi Krista,

This request has also been made to DEC but I'm not sure whether DOH or DEC would have the lead on this question. To what extent is DOH looking into whether there is or may be a PFC problem in drinking water or groundwater in any of the other communities (besides Hoosick Falls) where Saint-Gobain has facilities in NY – whether in public water systems or in private wells? According to their web page, <http://www.saint-gobain-northamerica.com/sites/default/files/SGManufacturingMap.pdf>, they have facilities located in:

- Buffalo, NY
- Watervliet, NY
- Amherst, NY
- Niagara Falls, NY (2)
- Granville, NY
- Hoosick Falls, NY
- Poestenkill, NY
- Albion, NY

According to their web site, the facilities located in Granville, Hoosick Falls and Poestenkill are Saint-Gobain Performance Plastics facilities, and the other ones are part of other Saint-Gobain divisions. If you are looking into these sites could you provide with some of the details (which communities, for what PFCs, what's being sampled etc.)

Thanks

Angela
